

WCE SME technical review and open workshop — Houston

Monday 19 to Thursday 22 October 2026 · 4425 Westway Park Blvd, Suite 170 · convened by Lee Arnold, WCE Manager · agenda draft 3, 10 October 2026 (draft 3: Andrew Dingee's technical standards workshop on the Wednesday and Thursday mornings, 09:00 to 12:00, agreed with Andrew 10 October; the displaced sessions re-timed and shortened, see the note at the end). Draft 2, 2 October: Ronnie's two-hour API Std 53 gap analysis; TOMs to the afternoon; the CoC tracker in the CBM workshop. Built from Lee's note to the team and the two-day training review

Shape of the week. Days 1 and 2 are the training review: hands on with the reporting tools and the dashboards, everyone posting real reports on the test asset. Days 3 and 4 are Lee's six focus areas as an open forum, with room for deeper workshops where the group sees value; both mornings, 09:00 to 12:00, are Andrew Dingee's technical standards workshop (procedures and standards; Andrew presents where he is, the group gives SME input in return). Every session ends by adding to one list: the action, the owner, the date. Each day 08:00 to 17:00; breaks at 10:00 and 14:30, lunch at 12:00. Lee opens the week; Dan presents the training review and the SACRED material; the group owns the rest.

Intended output, Lee's words: a clear, prioritised action list with agreed ownership and next steps, and a clear, detailed direction for the Well Control Equipment and MPD Seminar in Q1/Q2 2027.

Held slots, to be confirmed

What	Proposed	Status
Executive address: VP or SVP, and the potential CTO	Wednesday 21 October, 08:00 to 08:45, before the standards session; or the first slot on whichever day they can attend. The agenda moves around them	speaker and time to be confirmed by Lee
Team building	Wednesday 21 October, 15:30 to 17:00, in place of the last session, if the venue is nearby	awaiting reply
Dinner and social evening, one evening	Tuesday 20 October evening, after the training review closes, so the whole group is in town and the last two days follow it	awaiting reply

Day 1, Monday 19 October — the reporting tools, hands on (training review, part 1)

Time	Session	Led by
08:00 – 08:30	Opening: safety minute; roles and responsibilities; expectations for the four days and for the training review	Lee
08:30 – 10:00	WCGRRT: rig visit and daily reports; equipment entries, photographs and captions; report date and filename; the Capella-week mistakes and how the tool now guards them	Dan
10:00 – 10:15	Break	
10:15 – 12:00	WCGRRT: BOP function test, EDS, acoustic, EHBS and drawdown forms; attachments; Post and the receipt	Dan
12:00 – 13:00	Lunch	
13:00 – 14:30	SSORT: CBM inspection and NOV's five-level grade scale; test records attached to the equipment entry (REV 153); pre-deployment checklist with the packer attestation and cavity photographs; Post to OEM, and what NOV receives	Dan
14:30 – 14:45	Break	
14:45 – 17:00	Exercise: every participant produces one report of each type on the SSCE Equipment asset, posts it, and sees it land on the dashboard within ten minutes. One report per workspace; each participant on their own allocated date so nothing overwrites	all

Day 2, Tuesday 20 October — precharge, the dashboards, the AAB, the loop (training review, part 2)

Time	Session	Led by
08:00 – 10:00	Precharge process: the request form, the calculation, the issued sheet and its PDF; then the notification loop, where the record lives, the two signatures, all of it under MOC. Verified rigs under training well names; nothing is posted	Dan
10:00 – 10:15	Break	
10:15 – 12:00	Rig Visit Dashboard tab by tab: report list, rig monitoring, CBM heatmap, investigations, compliance, the Errors button, the full-report viewer, Ask SACRED AI	Dan
12:00 – 13:00	Lunch	
13:00 – 14:30	BOP Fleet Planning; SSCE Requests and the WCE COC Dashboard; the AAB tab and the Seadrill Bulletin Board (a Priority 3 advisory from creation to closure, proven in test mode)	Dan
14:30 – 14:45	Break	
14:45 – 15:30	The loop: how the tools connect today and how the rest will be; the TSC Help Centre hands on; what a failure looks like at each step and who sees it	Dan / Lee (SPARC, Maximo)
15:30 – 16:15	What is coming: the next six months on the rig and in the office	Dan
16:15 – 17:00	Feedback: what is hard on the rig today, what the tools should do next. Straight onto the action list	all
Evening	Dinner and social evening (held; awaiting reply)	

Day 3, Wednesday 21 October — technical standards with Andrew Dingee, API Std 53, TOMs

Time	Session	Led by
08:00 – 08:45	Executive address: VP or SVP, and the potential CTO (held; speaker and time to be confirmed)	Lee to introduce
08:45 – 09:00	WCE Technical Standards: where we stand. Lee sets the starting point for the workshop: the list of WCE standards, who owns each, what state it is in, what it is missing, and where it must align with API and the OEMs	Lee
09:00 – 12:00	Technical standards workshop, part 1. Andrew Dingee, procedures and standards, presents where he is; the group gives SME input in return. Ownership, structure and the gaps from Lee's framing go into the room as the material. Break 10:00 to 10:15 inside the slot	Andrew Dingee, Lee hosting
12:00 – 13:00	<i>Lunch</i>	
13:00 – 15:00	API Std 53, 5th edition against 4th: the gap analysis. Two hours, at Ronnie's request (2 October), on the seminar days and not in the training. The consolidated gap document (Dan and Jacob) walked through, then open discussion: what the 5th edition changes for BOP and control systems; the subsea drawdown test (West Neptune's Moduspec note: an initial latch-up accumulator drawdown is no longer required where LMRP accumulators are not relied on for sizing, against PRO-01-2025 as worded); the five-year subsea EDS with lift-off; API 64 against 30 CFR 250 for diverter testing and maintenance (Jacob's addition). Outcome: actions assigned to named people, and every change to MPD and Well Control procedures managed through an MOC	Ronnie, with Dan and Jacob
15:00 – 15:15	<i>Break</i>	
15:15 – 16:30	TOMs, Technical Operating Manuals. The WCE approach, content structure and priorities: clear guidance, decision trees, common activities. Workshop: pick one activity the fleet does every month and draft its decision tree in the room	Lee / group
16:30 – 17:00	Team building (held; awaiting reply). If it is on and takes the whole of 15:30 to 17:00, TOMs moves to Thursday 13:00 and the SACRED session shortens to one hour	

Day 4, Thursday 22 October — technical standards part 2, SACRED, CBM lessons, the action list

Time	Session	Led by
08:00 – 09:00	CBM lessons learned, from implementation, and the CBM workshop. The record: Riser Adapter ungraded for five weeks and how it was found; the positional-key failure and the id-based fix; NOV's criteria on the live path (85 of 110 graded tasks) and the mapping still open; the 40 MB ceiling and evidence never degraded; what NOV receives and cannot yet; Maximo and the daily item export; the Certificate of Conformance tracker rebuilt on the Maximo extract (Manpreet, 30 September) and the SSCE request path it has to keep. Then agree who signs what, where the record lives, and the one change that removes the most double handling	Dan, then the group
09:00 – 12:00	Technical standards workshop, part 2. Andrew Dingee continues from Wednesday: the standards the group chose to work, drafted and challenged in the room; what each needs to be issued. Outcome: the standards actions, owners and dates for the action list. Break 10:00 to 10:15 inside the slot	Andrew Dingee, Lee hosting
12:00 – 13:00	<i>Lunch</i>	
13:00 – 14:30	SACRED as the governed WCE technical repository. What it is today: the report pipeline, the dashboards, the digests and Ask SACRED AI, the loops on one pattern; the scanner on the server since the Sunday. Document accuracy and revision control: the REV badge, the written handoff before a change ships, the integration contract; where a formal document-control step is still needed. Lessons-learned capability: the Help Centre trail, the AAB evidence, the Errors feed. Usability and workflow: what the group clicked on days 1 and 2, straight into the list	Dan, then the group
14:30 – 14:45	<i>Break</i>	
14:45 – 15:45	Lessons learned, technical improvements and the efficiency forum. One session: recurring fleet issues, good practices and technical recommendations, each sorted into where it belongs (a standard, a TOM, a maintenance requirement, SACRED content); and the efficiency items, everyone brings one: unnecessary administration, duplicated effort, bottlenecks. Known starters: every notification links to the dashboard so a report is read once; SSORT says "posted" when a post failed, WCGRRRT does not; the precharge loop as the template where nobody retypes anything; what is still on paper or in email that could be a post	group, Lee chairing
15:45 – 16:30	The action list. Every item from four days, prioritised, an owner and a date on each. What goes into standards, TOMs, maintenance requirements, SACRED content; what needs a change pack	Lee
16:30 – 17:00	Direction for the WCE and MPD Seminar, Q1/Q2 2027. Themes, who presents, what the fleet needs to hear. Close	Lee

What draft 3 changed, for Lee to confirm. Andrew Dingee's six hours take both mornings, so six hours of draft 2 moved or shortened: Lee's standards session becomes a fifteen-minute framing that hands into Andrew's workshop (the workshop is the standards session); the API Std 53 gap analysis keeps its two hours and moves to Wednesday afternoon; TOMs loses fifteen minutes; the CBM lessons and the CBM workshop become one hour on Thursday at 08:00; SACRED goes to Thursday afternoon at ninety minutes; lessons learned and the efficiency forum merge into one hour; the action list has forty-five minutes. If that is too tight for the action list, the simplest relief is to start Thursday at 07:30 or to take thirty minutes from the SACRED session.

How the two halves join: the training review on days 1 and 2 is the evidence for days 3 and 4. What the group finds hard, slow or unclear while posting real reports on the test asset goes onto the same action list as the standards and TOMs work, so the efficiency forum on Thursday argues from what people did on Monday, not from memory. Everything in SACRED that the group sees is the version the fleet uses, with the scanner on the sacred server from the week of 19 October. The two-day training agenda (draft 7) carries the session detail for days 1 and 2; the day 3 and 4 content is Lee's to shape from the topics the team sends in.
