

Dashboards and Reporting Tools — two-day class

Agenda and timings · 08:00 to 17:00 each day · seven teaching hours a day · week plan item 22 · draft 2, 23 September 2026

Each day: 08:00 start · 10:00 break (15 min) · 12:00 lunch (60 min) · 14:30 break (15 min) · 17:00 close. No trainee ever posts: reports are saved locally, the trainer drops them into a training folder that a second scanner configuration reads and deploys to the sandbox site, so the fleet dashboard never sees them.

Day 1 — the reporting tools, hands on

Time	Module	Led by
08:00 – 10:00	WCGRRT: rig visit and daily reports; equipment entries, photographs and captions; report date and filename; the Capella-week mistakes (posting before finishing, entry dates left behind) and how the tool now guards them	Dan
10:00 – 10:15	Break	
10:15 – 12:00	WCGRRT: BOP function test, EDS, acoustic, EHBS and drawdown forms; attachments; Post and the receipt; Load latest posted	Dan
12:00 – 13:00	Lunch	
13:00 – 14:30	SSORT: CBM inspection and NOV's five-level grade scale; pre-deployment checklist with the packer attestation and cavity photographs; Post to OEM	Dan / Brad Waldron
14:30 – 14:45	Break	
14:45 – 17:00	Exercise: every trainee produces one report of each type on the SSCE Equipment asset, saves it locally, and sees it land on the sandbox dashboard via the training folder	all

Day 2 — precharge process, the dashboards, what is coming, feedback

Time	Module	Led by
08:00 – 10:00	Precharge process: the request form, the calculator, the issued sheet and its PDF, the notification loop, who signs, where the record lives, the MOC; worked examples on real rigs	Dan (precharge responsible)
10:00 – 10:15	Break	
10:15 – 12:00	Rig Visit Dashboard tab by tab: report list and dates, rig monitoring, CBM heatmap and grade history, the Errors button, the report viewer and printing, Ask SACRED AI	Dan
12:00 – 13:00	Lunch	
13:00 – 14:30	BOP Fleet Planning Dashboard; SSCE Requests Dashboard and the COC dashboard; the AAB tab and the Seadrill Bulletin Board: how a Priority 3 advisory reaches the rig and how the TSL acknowledges	Dan / Eric Rachall (AAB)
14:30 – 14:45	Break	
14:45 – 16:00	What is coming: the AAB loop pilot and the Bulletin Board; photographs and attachments out of the report file, then the database; the CBM photo review agent against the NOV criteria; Load latest posted in the tools; the MOC and HAZID tools; the read-only AAB view in WCGRRT; the next tool revisions and how they are announced. Where the estate is heading and what changes on the rig in the next six months	Dan
16:00 – 17:00	Feedback session: what is hard on the rig today, what the tools should do next; captured on the day and fed into the next tool revisions	all

Dropped from the three-day version on Dan's instruction, 23 September: precharge theory (API 16D methods, corrections, qualification examples) and the day on the plumbing of the loops (intake, SharePoint, scanner, server, failure modes). Pack still to build (pinned until the server migration is signed off): slide decks per module on the Seadrill template, trainee workbook with the exercise, trainer's script, the training-folder scanner configuration. Dates, venue and audience: Dan.
