

Dashboards and Reporting Tools — the training review, days 1 and 2 of the WCE SME workshop

Within Lee Arnold's WCE SME technical review and open workshop, Houston, Monday 19 to Thursday 22 October 2026 · these two days: the training review (CBM focus area) and the SACRED review · Lee opens; Dan presents throughout · week plan item 22 · draft 9, 2 October 2026 (frozen builds WCGRRT 167, SSORT 154; CoC tracker module from Manpreet's handoff)

Each day: 08:00 start · 10:00 break (15 min) · 12:00 lunch (60 min) · 14:30 break (15 min) · 17:00 close. Trainees post for real, on the SSCE Equipment asset only: it is a non-rig bucket that never enters a fleet count, the notification flows treat it as test mode (office only), and Dan deletes the class's posts from PostedReports afterwards, so the dashboard clears them on the next scan (Dan, 30 September). The precharge segment posts nothing.

Day 1, Monday 19 October — the reporting tools, hands on

Time	Module	Led by
08:00 – 08:30	Opening: safety minute; roles and responsibilities; expectations for the four days and for these two	Lee
08:30 – 10:00	WCGRRT: rig visit and daily reports; equipment entries, photographs and captions; report date and filename; the Capella-week mistakes (posting before finishing, entry dates left behind) and how the tool now guards them	Dan
10:00 – 10:15	Break	
10:15 – 12:00	WCGRRT: BOP function test, EDS, acoustic, EHBS and drawdown forms; attachments; Post and the receipt	Dan
12:00 – 13:00	Lunch	
13:00 – 14:30	SSORT: CBM inspection and NOV's five-level grade scale; pre-deployment checklist with the packer attestation and cavity photographs; Post to OEM	Dan
14:30 – 14:45	Break	
14:45 – 17:00	Exercise: every trainee produces one report of each type on the SSCE Equipment asset, posts it, and sees it land on the dashboard within ten minutes under SSCE Equipment. One report per workspace, cleared between reports; each trainee enters their allocated report date (1 to 10 October 2026) so the ten sets of files do not overwrite each other	all

Day 2, Tuesday 20 October — precharge process, the dashboards, the AAB, the loop, what is coming, feedback

Time	Module	Led by
08:00 – 10:00	Precharge process: the request form (Rev 3), the calculation (Precharge Pro Rev 87) and the issued sheet and its PDF, from the Precharge Pro session's modules; then the notification loop, where the record lives, who signs, the MOC. Worked on verified rigs under training well names (TRAINING-On NOT ISSUED); nothing is posted	Dan (precharge responsible)
10:00 – 10:15	Break	
10:15 – 12:00	Rig Visit Dashboard tab by tab: report list and dates, rig monitoring, CBM heatmap and grade history, the Errors button, the report viewer and printing, Ask SACRED AI	Dan
12:00 – 13:00	Lunch	
13:00 – 14:30	BOP Fleet Planning Dashboard; the WCE Certificate of Conformance tracker , taught from Manpreet Singh's handoff of 30 September (the Maximo extract as the master record; Update from Excel and Save copy; the status tiers and why "no date on file" is 59% of the fleet; one row per asset with certificate history; compliance ticks live in the viewer's own browser; shareable addresses and exports); the SSCE Requests Dashboard and the Request path; the AAB tab and the Seadrill Bulletin Board: how a Priority 3 advisory reaches the rig and how the TSL acknowledges. The API Std 53 gap analysis is not in this class; it is Wednesday morning of the workshop	Dan
14:30 – 14:45	Break	
14:45 – 15:30	The loop: how the tools connect today and how the rest will be connected. One post becomes a dashboard row, an email and a record (the intake, SharePoint, the scanner, the sacred server); the notification loops and their test mode; the TSC Help Centre, ten minutes hands on: ask Technical Services for help from the tool, the email and the Teams chat it opens, the delivery receipt, and the acknowledgement from the page back into the same conversation; the COC Dashboard (the Certification Tracker) and the SSCE request cycle; SPARC and Maximo; the database that feeds the same pages from February 2027; Ask SACRED AI over it all; what a failure looks like at each step and who sees it	Dan / Lee (SPARC, Maximo)
15:30 – 16:15	What is coming: the AAB loop pilot and the Bulletin Board; photographs and attachments out of the report file, then the database; the CBM photo review agent against the NOV criteria; Load latest posted in the tools; the MOC and HAZID tools; the read-only AAB view in WCGRRT; the next tool revisions and how they are announced. Where the estate is heading and what changes on the rig in the next six months	Dan
16:15 – 17:00	Feedback session: what is hard on the rig today, what the tools should do next; captured on the day and fed into the next tool revisions	all

Draft 7, 30 September (Lee's email to the team): the class is days 1 and 2 of the WCE SME technical review and open workshop, 19 to 22 October, Houston; Lee opens Day 1 with the safety minute, roles and responsibilities and expectations; Dan presents everything. Days 3 and 4 are Lee's agenda (standards, TOMs, CBM lessons, SACRED review, lessons learned, efficiency forum); the four-day agenda with our two days inside it is `WCE-SME-Workshop-Agenda.html`. Draft 6, 30 September (tools session reply): Load latest posted is not in WCGRRT REV 166 and comes off Day 1 (it stays under what is coming); the frozen builds are WCGRRT REV 167 and SSORT REV 154 (moved 1 Oct for the EHBS timer and the SSORT restore fixes, rolling handoff entry 45); the exercise rule for one report per workspace and per-trainee dates. Draft 5, 30 September (Dan): Brad Waldron will not attend, so the SSORT segment is Dan alone; the TSC Help Centre joins the loop module as ten minutes hands on; no sandbox: the class posts on SSCE Equipment and the posts are deleted afterwards. Draft 4, 29 September: dates confirmed (19 and 20 October, final pack 12 October); the precharge segment worked on real, verified rigs under training well names because the calculator has no SSCE Equipment asset and nothing in it changes for the class (Dan). Draft 3, 29 September (Dan): the loop module

returns as forty-five minutes on Day 2, the plan for connecting the tools rather than a day on the plumbing; the WCE COC Dashboard (the Certification Tracker) and SPARC get separate content handoffs. Dropped from the three-day version on Dan's instruction, 23 September: precharge theory (API 16D methods, corrections, qualification examples) and the full day on the plumbing of the loops (intake, SharePoint, scanner, server, failure modes). Pack still to build: trainee workbook with the exercise, trainer's script. Dates, venue and audience: Dan.
